The President's Choice

The New Generation SMART Alkaline Water Ionizer

Professor KJ Lee (right), President of Korean Water Society & Head Professor, Medical Faculty, Yonsei University with Mr SS Kwon, Vice President of Korean Water Society.

The President's Choice – *KempSmart i*

KempSmart i was singled out for praise by Medical Faculty Head Professor KJ Lee, of Yonsei University, Korea, and also the current President of Korean Water Society for being the Best water ionizer made in Korea. Professor Lee said that

“KempSmart i water ionizers are an excellent showcase of joint Korean Innovation and Smart Technology, and its quality and user friendly features make it to be my top choice.”

In his address at Korean Water Association conference, he touched on the “significant progress made in the clinical trials both in Japan and Korea and the health benefits have been discovered thus far.”

Health Benefits

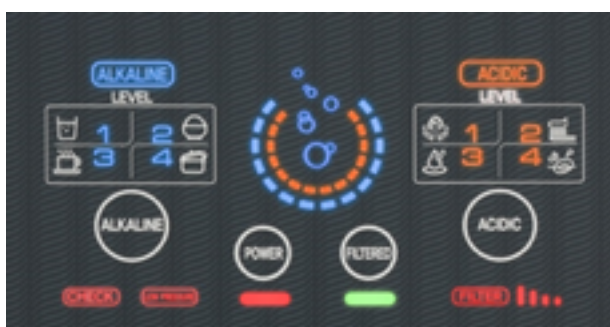

Many research works and clinical studies have been carried in Japan and the health benefits are believed to be in the refinement of water molecules and its associated properties such as pH, negative ORP and enrichment of activated Hydrogen. In 1999, the Japanese Association of Medical Science carried out the World first double blind tests in Japan, and concluded that “Alkaline Water is useful for a range of diseases!”

With up to 70% of the human body being made up of water, it is understandable the quality of water does impact our wellbeing such as hydration, pH and of course the level of anti-oxidants. Our body fluid should be slightly alkaline at pH 7.365, if there is any decline of alkalinity, it can affect our immunity and health.

***KempSmart i* Smart Technology**

KempSmart i is the product of joint research works done by Japan, Korea and Singapore and it took several years to perfect the machine. The smart program remembers the users' choice of water, water quality, cleaning cycle, and the filter change. Besides, the machine has built-in "fool Proof" system to prevent users for taking unintended water such as "acidic water." This feature is useful especially in Singapore where maids cater for the olds and children at homes whilst you are at work.

Researchers picked newer Platinum coated MESH plates instead of solid plates which are older technology being used since 1800's, for it saves energy, higher efficiency, better cooling effect, and less burning effect which could cause oxidation, and thus metal contamination.

Kemp Singapore being the pioneer & leader in alkaline water technology has played a great role in propelling this technology forward by collaborating with our Korean and Japanese partners. *KempSmart i* water ionizers are

the product of this collaboration. With this new Smart technology, it produces SAFE, light and healthy water. Smart technology can cope with wider variation of water sources too.

With over 27 years' experience, we pride ourselves on being a reputable and distinguished water ionizer provider offering excellent services and providing superior quality systems. We are proud to introduce Singapore's First New Generation Alkaline water ionizer, KempSmart i series with their trademark Smart technologies giving life-giving water rich in antioxidants and activated hydrogen. Coupled with the newest KDF55 0.01m ultra fine filter, it offers customers unprecedented case of use with optimal filtration.

Kemp Singapore carries a wide range of models ranging from counter top to under-sink water ionizers that complement with any kitchen décor.
